alpha-galactosidase (EC 3.2.1.22) - kidney bean
C;Species: Phaseolus vulgaris (Kidney bean)
C;Species: Phaseolus vulgaris (Kidney bean)
C;Date: 16-Jul-1999 #sequence_revision 16-Jul-1999 #text_change 09-Jul-2004
C;Accession: T10866
R;Davis, M.O.; Walker, J.C.; Smith, D.
submitted to the EMBL Data Library, August 1994
A;Description: Cloning and expression of a pinto bean alpha galactosidase gene.
A;Reference number: Z17189
A;Accession: T10860
A;Accession: T10860
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Rolecule type: mRNA
A;Residues: 1-425 < DAV>
A;Residues: 1-425 < DAV>
A;Cross-references: UNIPROT:Q41100; UNIPARC:UP100000A0F13; EMBL:U12927; NID:g927576; PIC
C;Function:
A;Description: catalyzes hydrolysis of melibiose into galactose and glucose
C;Superfamily: alpha-galactosidase
C;Keywords: glycosidase; hydrolase
                                                                                                                                                                                                                           325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                249
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         224

A;Title: Cloning and nucleotide sequence of the alpha-galactosidase cDNA from Cyamopsis A;Reference number: S07472; MUID:91370836; PMID:2577496
A;Refecession: S07472
A;Molecule type: mRNA
A;Residues: 1-411 <0VB>
A;Cross-references: UNIPROT:P14749; UNIPARC:UPI00001256A9; EMBL:X14619; NID:918291; PIDN A;Note: the authors translated the codon ATT for residue 20 as Asn, TAT for residue 140 C;Superfamily: alpha-galactosidase
C;Keywords: glycosidase; hydrolase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      262

This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been the Sall and HindIII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before HindIII site to maintain reading frame.

This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics.

This ORF clone has been cloned with normalized stop-codon. The CDS has been directionally cloned using BD In-Rusion(TM) cloning system between the Sall and HindIII sites of the pDNR-Dual vector.

Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence. Each clone is clonally isolated and full-length sequence-verified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DWGVDLLKFDGCYCDSLENLADGYKHWSLALNRTGRSIVYSCEWPLYMPFQKDNYTE

The invention relates to human alpha-galactosidase truncated at the carboxy terminus and the production of enzymatically active recombinant human and animal lysosomal enzymes. The invention is useful for producing lysosomal enzymes for treating lysosomal storage diseases, producing altered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substrates for further in vivo or in vitro processing to a specialised industrial form for research or therapeutic uses, to produce more effective therapeutic enzyme, for producing antibodies against lysosomal enzymes for medical diagnostic use, and in any sequence is human rGAL-8 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         99

  enzymes in a plant expression system that can be used in enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                The invention relates to human alpha-galactosidase derivatives and the nucleic acids encoding them. The polypeptides are used in a method for producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes can be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents DNA encoding a human alpha-galactosidase derivative polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ATGCAGCTGAGGAACCCAGAACTACATCTGGGCTGCGCGCTTGCGCTTCGCTTCCTGGCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  900
                                                                                                                                                                                                                                                                                                                          The invention relates to nucleotide encoding galactosidase (GAL). The invention is useful in gene therapy. The polymucleotides and polypeptides are useful in treating human and animal lysosomal storage diseases, e.g. Fabry's disease and Gaucher's diseases. The present sequence is human GAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ACCATGGGCTGGCTGCGCAGCGCTTCATGTGCAACCTTGACTGCCAGGAAGAGCCA 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel galactosidase (Gal) proteins such as rGAL-12, rGAL-12R, r-GAL-25 or rGAL-25R. The methods and compositions of the present invention are useful for producing recombinant lysosomal enzymes for enzyme replacement therapy for treating human and animal lysosomal storage diseases sucher's adisease. Niemann-Pick disease, Rabry disease and Tay-Sachs disease. The present sequence is human wild type rGAL-8 DNA used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alphagalactosidase enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Eabry's disease and Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocarebrosidase (GCB, GCR) and alpha-invention relates to glucocarebrosidase (GCB, GCR) and alpha-galactosidase (Gal) enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Fabry's disease, Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the
